200 Series Liquid Wax Release

TR Liquid Wax Releases are useful in the fabrication of Tub/Shower and Custom Marble utilizing a floating bowl.

TR-210 or TR-216 is HIGHLY recommended. Cleans and Releases in a single step. Active solvent blend reduces build-up and maintains GLOSS retention.

Formulated to parallel our 100 Series, Paste Wax Release, with features to speed production, reduce or minimize STYRENE/WAX accumulation which extends GLOSS RETENTION and slip properties. Results in LESS MOLD DOWN-TIME and INCREASED PRODUCTION.

PRODUCT	REGULAR	ONE-STEP	HI-TEMP
APPLICATION	**TR-214**	**TR-210**	**TR-216**
All Open Mold Spray or Hand Lay-Up	TR	TR	TR
Marble and other Thick Cast Molding		TR	TR
Corrosion, Tanks and Piping	TR	TR	
RTM/Compression		TR	TR
Polymer Concrete/Rough Surface			TR

Always condition or prep a new mold with multiple coats of Paste Wax before incorporating regular use of only a Liquid Wax Release. Refer to our product brochure for new or reconditioned mold break-in.

Once conditioned with PASTE WAX and 2-3 parts have been de-molded, regular use of the TR-200 Series Liquid Release speeds production and reduces build-up. This results in cleaner high gloss parts by maintaining gloss retention.

When tooling is stored, clean and re-coat with 2 applications of PASTE WAX prior to resuming use of Liquid Wax Release.

Shake Liquid Waxes well before and during use. Slight settling or separation occurs while standing.

TR-210 Liquid Self-Stripping Wax Release
The most popular Liquid Wax Release used in the Composite/ Fiberglass markets. A ONE-STEP CLEANER/ RELEASE, all in one.

TR-214 Regular Liquid Wax Release
Comparable wax blend to the TR-210 with less active solvent. Dries slower than the 210 and less cleaning ability. Easily applies and wipes clean.

TR-216 Hi-Temp Liquid Wax Release
Slightly different wax base than the TR-210 or TR-214. Uniform wax solution with excellent properties.
